Write your reflection below:

In creating this program, I'm most proud of my organization of elements to effectively leverage the event-driven paradigm of GUI programming. With boxes acting as larger components, and the elements within those boxes as sub-components, I was able to follow my design for this game by first establishing a layout with GUI boxes. Following, for each GUI box, I allotted it its corresponding elements, which gave it its function. With this approach to abstracting the board into sections with different purposes, I was able to build this site in an intuitive and organized manner rapidly. Additionally, I'm also proud of my leveraging of JavaFX elements, such as imageView to improve the program beyond the experience possible with a regular console UI. Finally, in reflecting on this project, content with the new material I used to build this website such as sliders and radio buttons which I learned how to use from online resources. By leveraging these outside tools, I was able to make my program more interactive, and ultimately, in my eyes more enjoyable to use.

Before submitting, verify that your code is in your [GitHub repository](#)!

Concerns <i>Areas that need improvement</i>	Criteria	Strengths <i>Areas that exceed expectations</i>	Level
A1.2, 2.1, 2.3, B1.2 Use data types (type conversion) and modular design concepts (JavaFX components, events, layouts) in computer programs			
	My program accepts numeric input properly and displays output in a meaningful way I use a variety of JavaFX components to create a clear user interface that meets program requirements		4+

ICS4U Unit 1: Java & JavaFX

Assignment: JavaFX Guessing Game

	My program enhances the provided Java program by implementing the event-driven paradigm Weight: 10		
--	--	--	--

Code Conventions Checklist:

Criteria Weight: 10	No (0 pt)	Sometimes (1 pt)	Yes (2 pt)
uses whitespace and indentation as appropriate to make code easy to read			✓
uses proper naming conventions for packages, classes, variables, constants & methods			✓
uses variable & constant names that are descriptive and make code easy to understand			✓
validates user input (e.g. try ... catch blocks, loops, etc), and provide appropriate feedback			✓
limits the scope of variables and fields to the smallest necessary			✓
uses single-line comments (//) to document the 'why' behind coding decisions			✓
uses doc comments (/** */) to create internal documentation for objects that are reused			✓
no duplicated code (refactor into a method!) or unnecessary lines of code			✓
no Warnings from the Problems view or TODOs from the Task view in the Eclipse IDE			✓
no blocks of commented code in the final product			✓
